# Practical 1

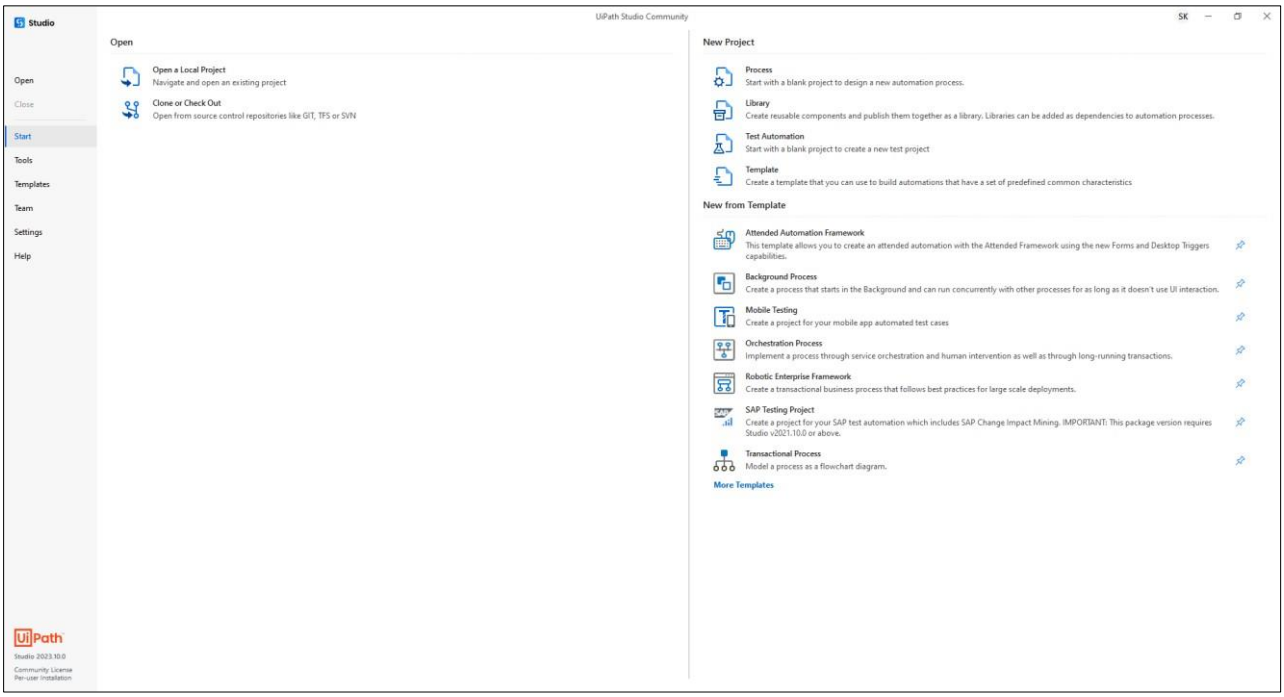
## A. Create a simple sequence-based project.

**AIM: Use two input dialogs for storing two numbers and display addition of them in message box.**

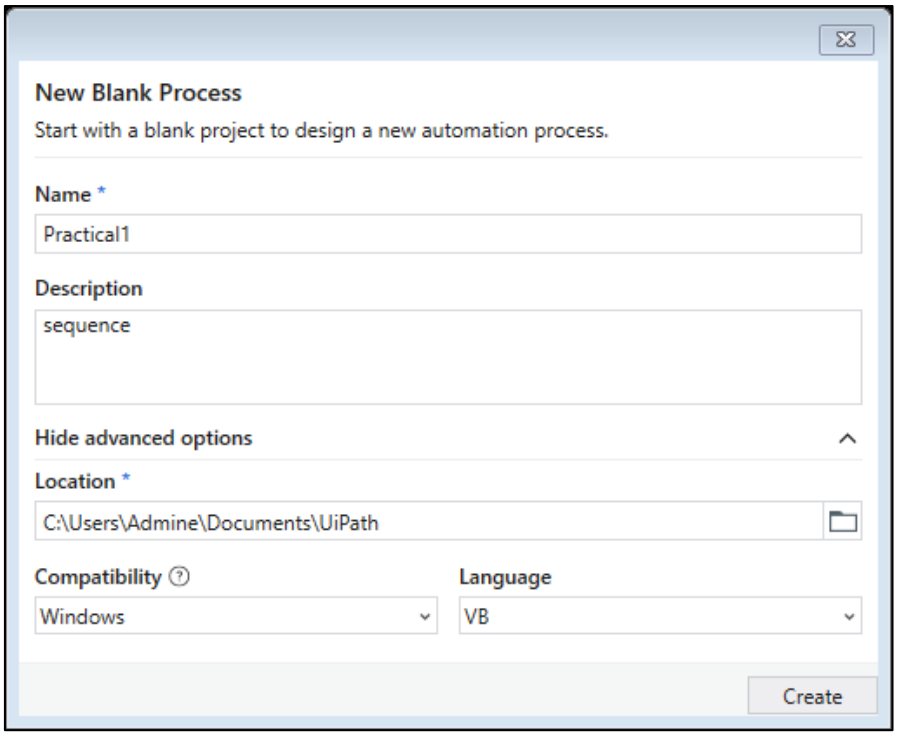
1. Download UiPath Studio Community version from: [Studio - Install Studio (uipath.com)](). Click on Try UiPath Free and create your account then download UiPath community version.

2. After installing UiPath, login to your account. After login below screen will be displayed.

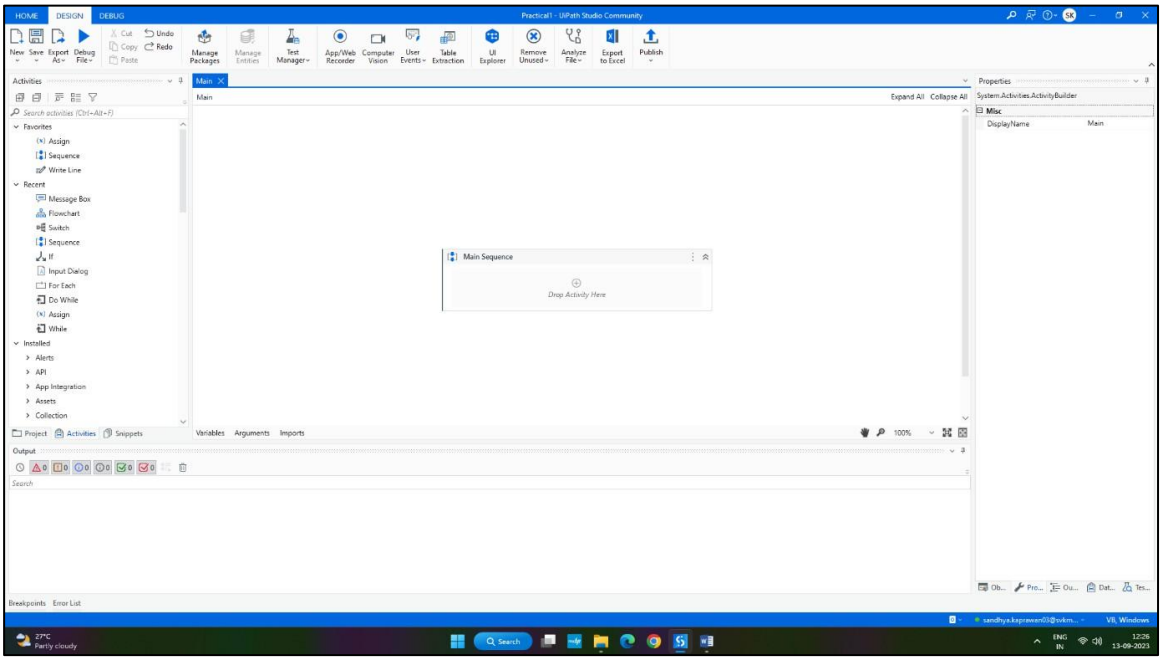
3. For creating new project, click on Process from New Project list.



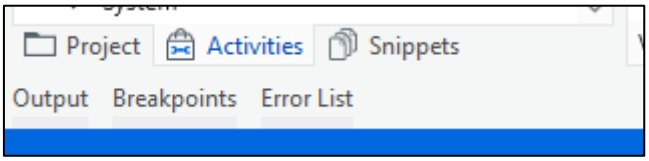
4. Type 'Practical1' in Name and sequence in Description for project. We can change the location for our project, by default it is in 'C:\Users\Admin\Documents\UiPath'. Click on create.



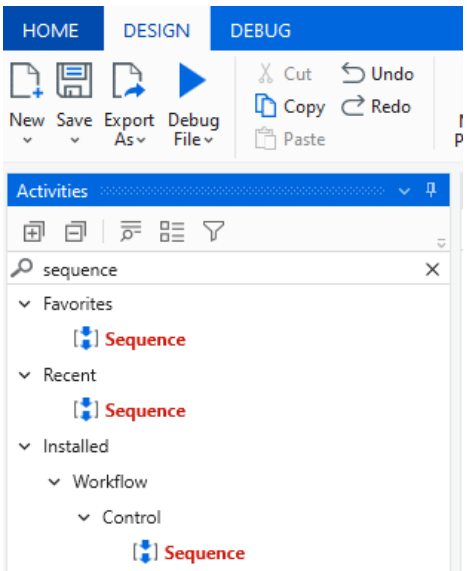
5. Practical1 project will be created. We can see email from which we are signed in, in the bottom right side. Home tab will be displayed, click on Design Tab. We can see Project, Activity and snippets on left hand side. The panel located on the right-hand side of the user interface is for viewing the properties of the activities and for making any changes, if required.

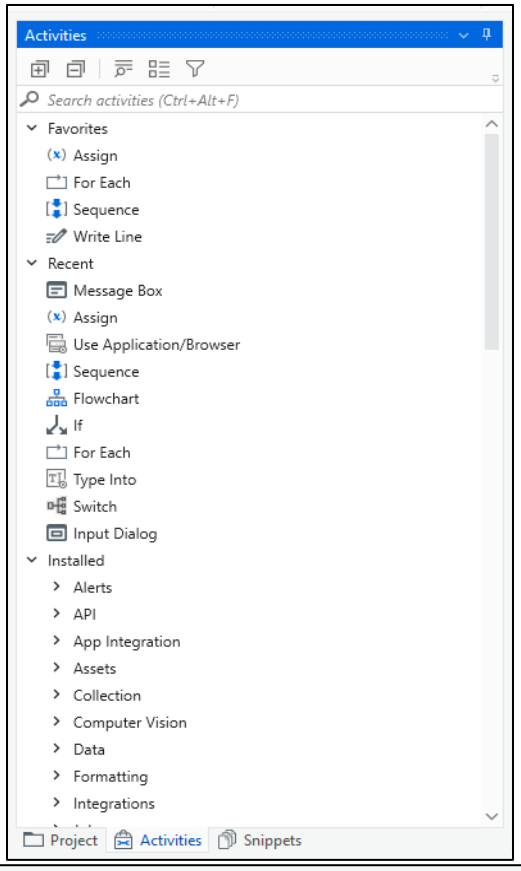


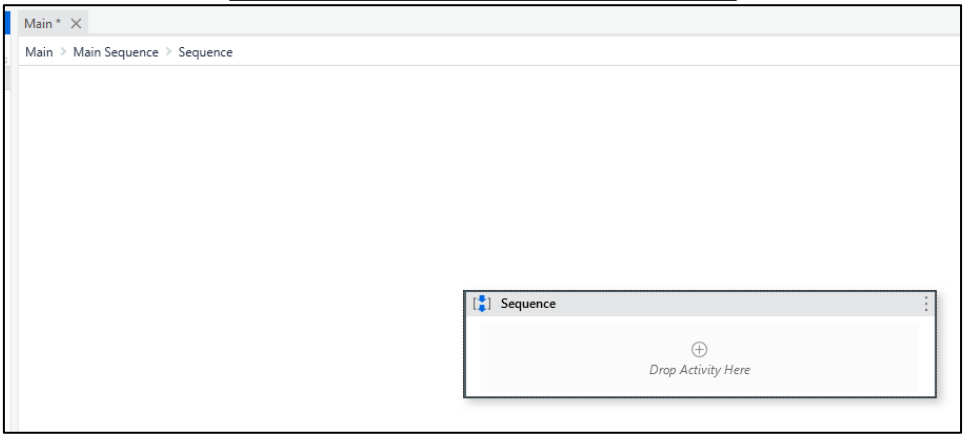
6. Click on Activities, we can drag and drop activities from Activity panel by manually locating them or searching it in search activities.



7. Now, click on search activities, type sequence and drag and drop Sequence to Designer Panel under Main Sequence.

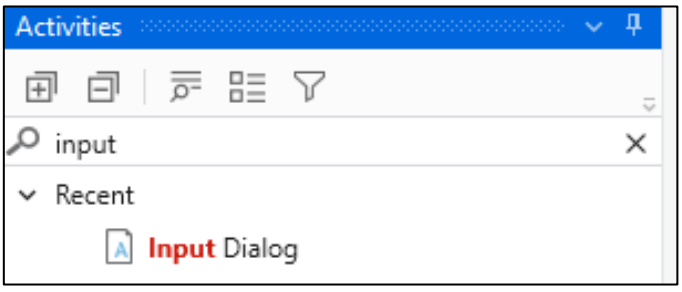


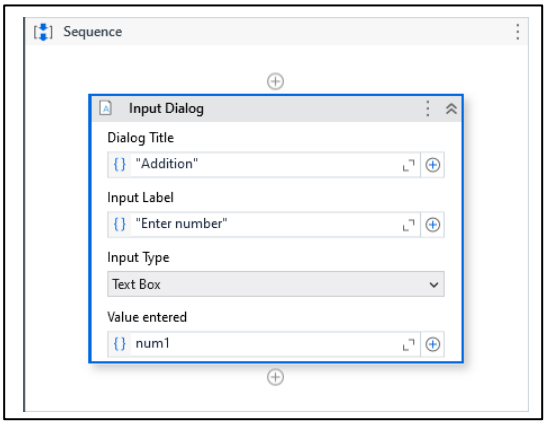




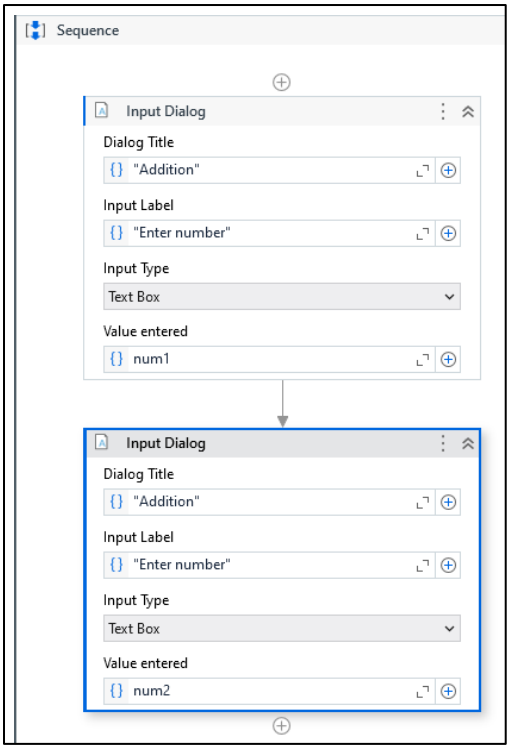
8. Type input dialog and drag it inside sequence activity. In Input Dialog box, type addition in Dialog Title, Enter number in Input Label and select Text Box in Input type and create one variable num1 and select it in value entered.

9. For creating variable, click on variable below Designer panel click on new variable and name it num1, select data type as int32.

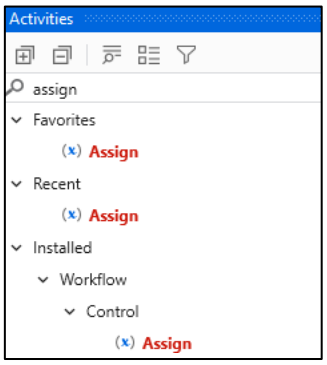


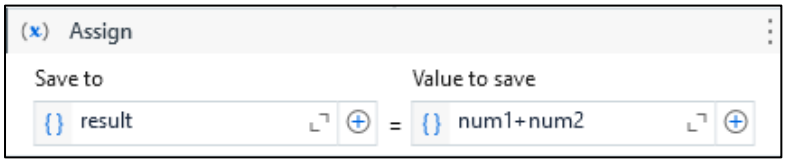


10. Drag one more input dialog box and follow same process for it. Give variable name as num2.



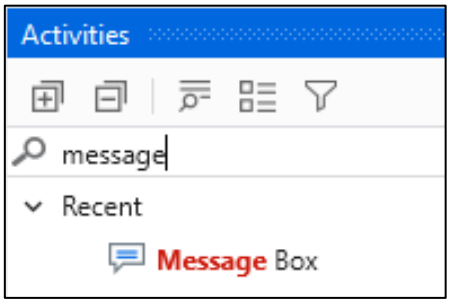
11. Search for assign activity and drag it below second input dialog box. Create variable result and select Int32 as variable type of variable num1, num2 and result. Select 'result' in Save to and 'num1+num2' in Value to save.

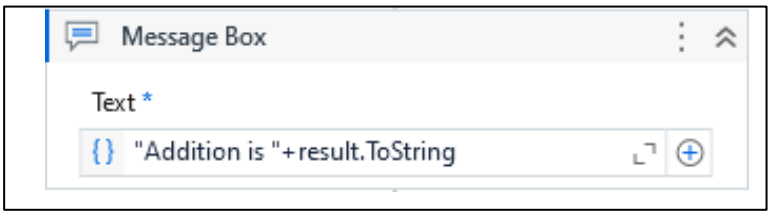




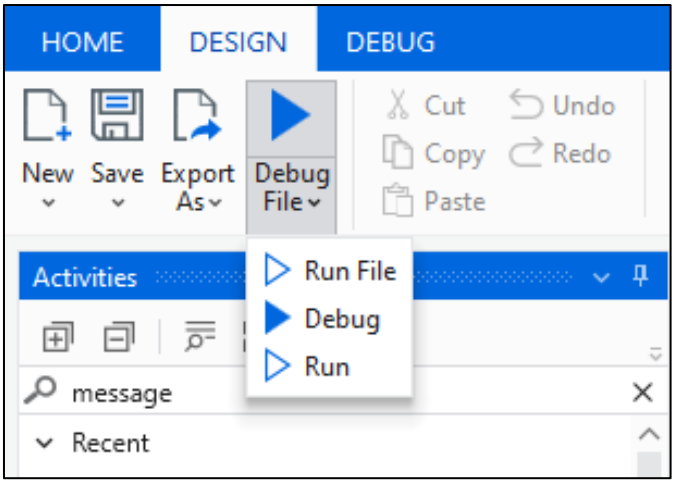
12. Search for message box and drag it below assign activity. In Textbox type "Addition is "+result.ToString.

13. Again, drag and drop message box and type your name and sapid in it.

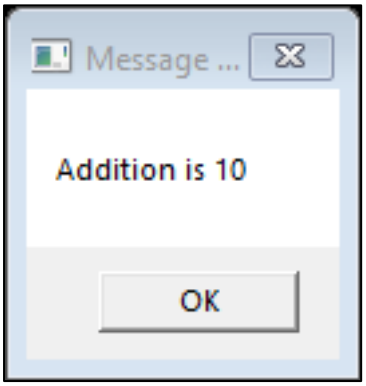




14. Save it and press CTRL+F6 Or click on debug file and Run File.



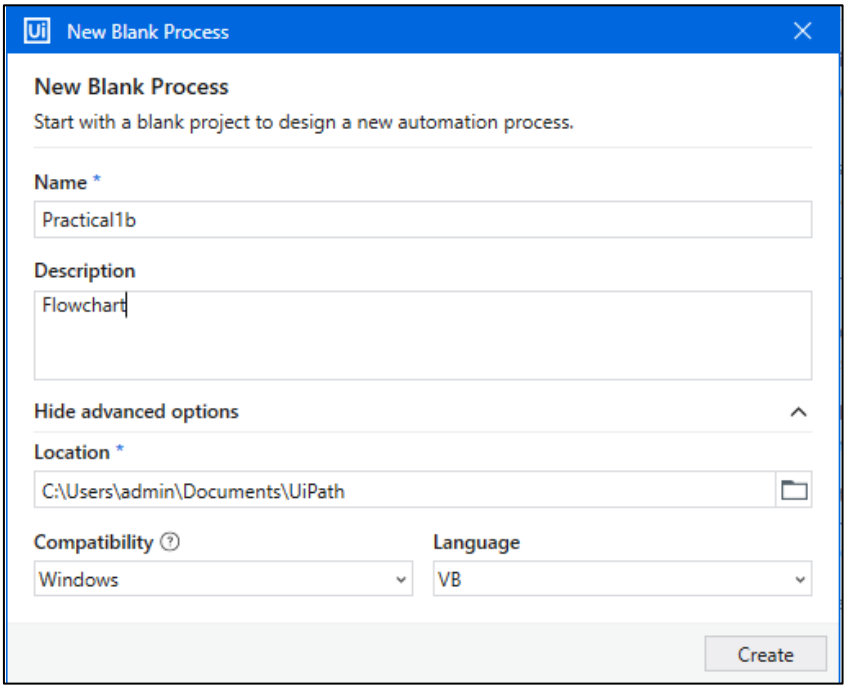
15. Type ‘5’ in first input box and ‘5’ in second input box. Result will be displayed.



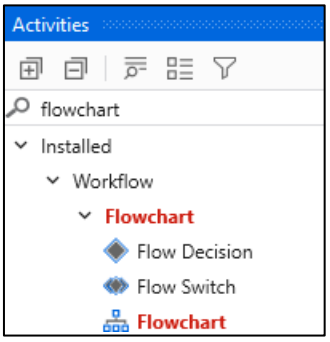
## B. Create a flowchart-based project.

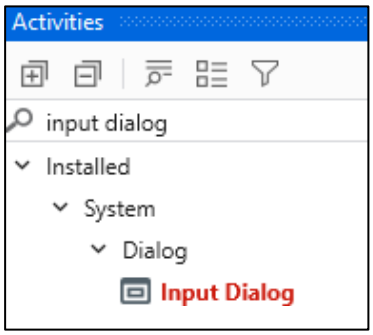
**AIM: Use input dialog box to take number from user and using flow decision check whether it is even or odd using message box.**

1. Click on Process and Select blank process and name it Practical1b, give description click create.

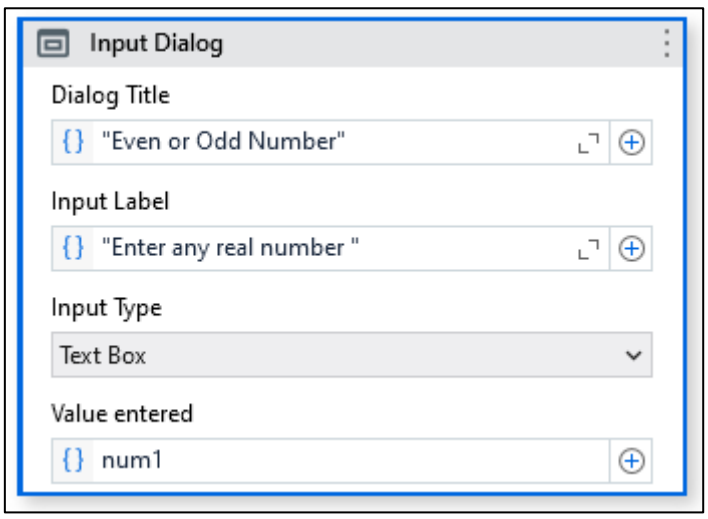


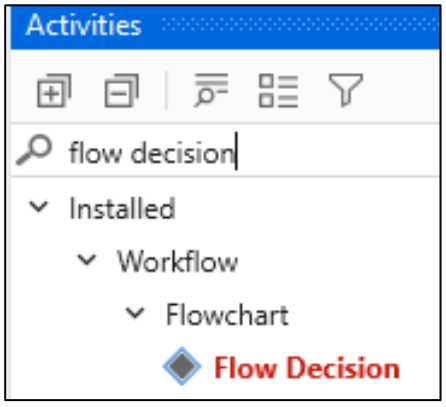
2. Click on Activities, search flowchart and drag and drop it inside main sequence. Do same step for input dialog and drag it inside flowchart below the start and set it as start node.



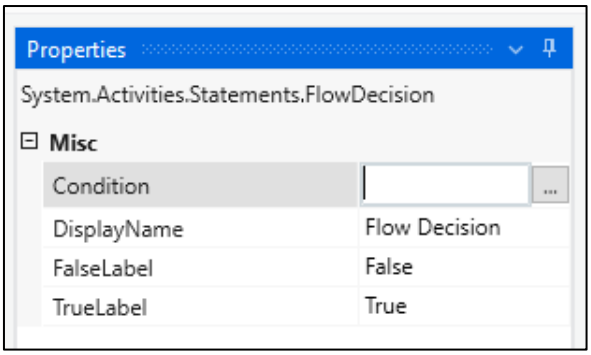


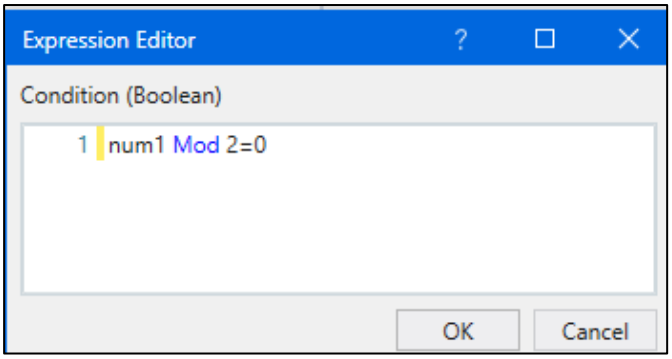
3. Inside input dialog box, fill in the details as given. Search for flow decision and drag it below input dialog box.



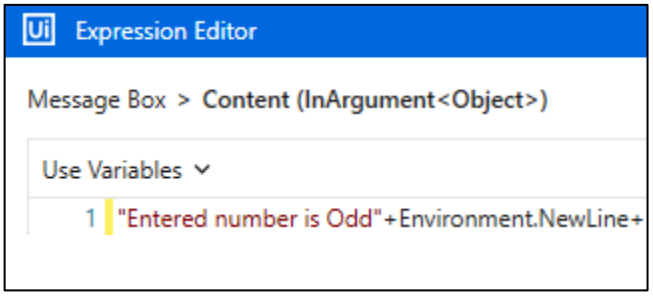


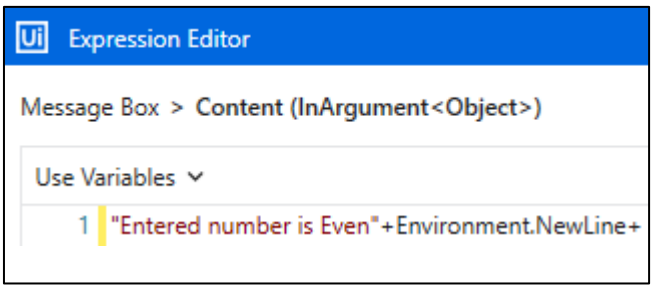
4. Open properties panel for flow decision and in condition box, open editor write “num1 Mod 2=0”.



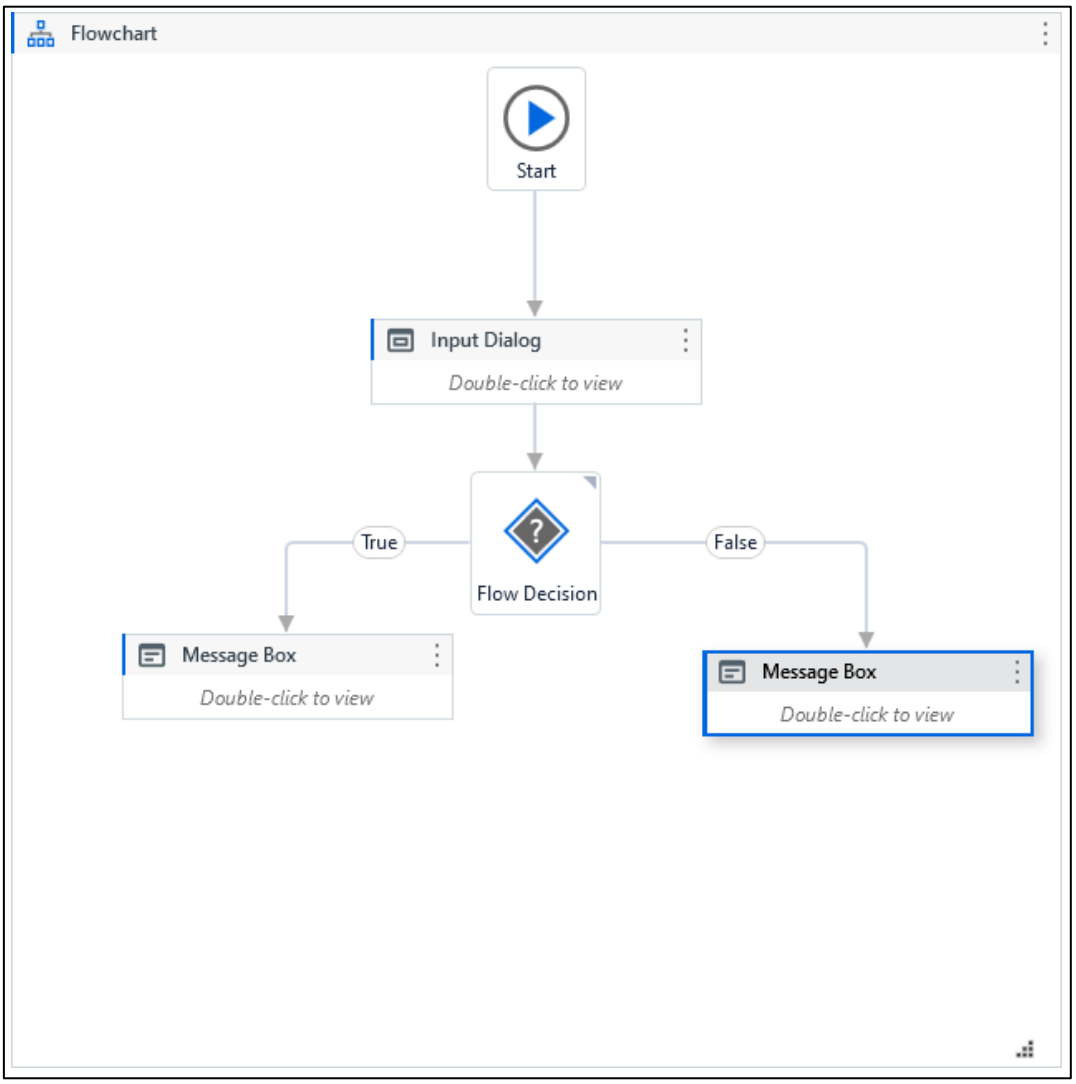


5. Search for message box and drag two below flow decision and connect one to true and one to false side of flow decision. Type message as shown below.

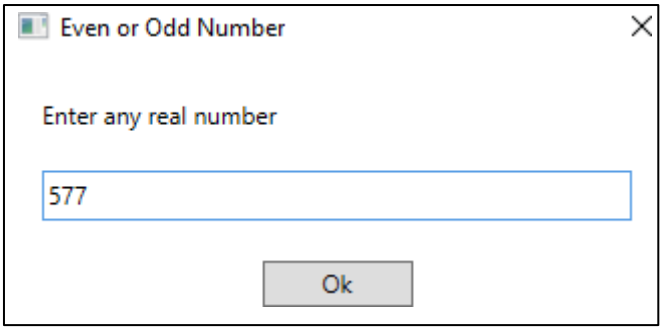


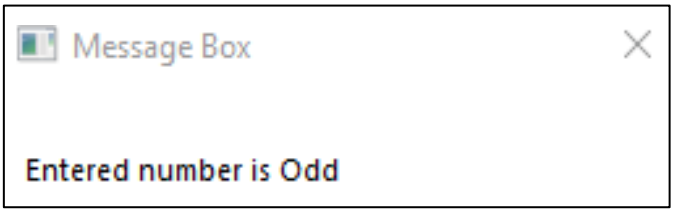


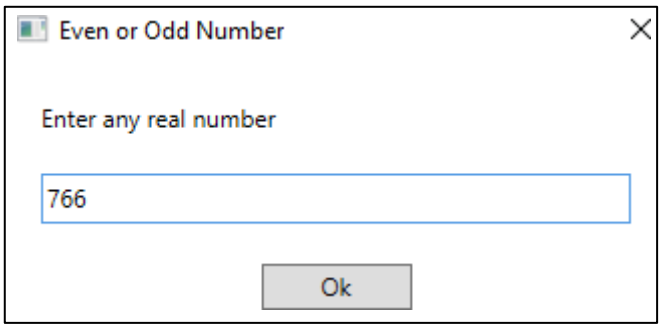
6. Entire flow chart will look like this



7. Click on Run file or press CTRL+F6. Output will be like this.



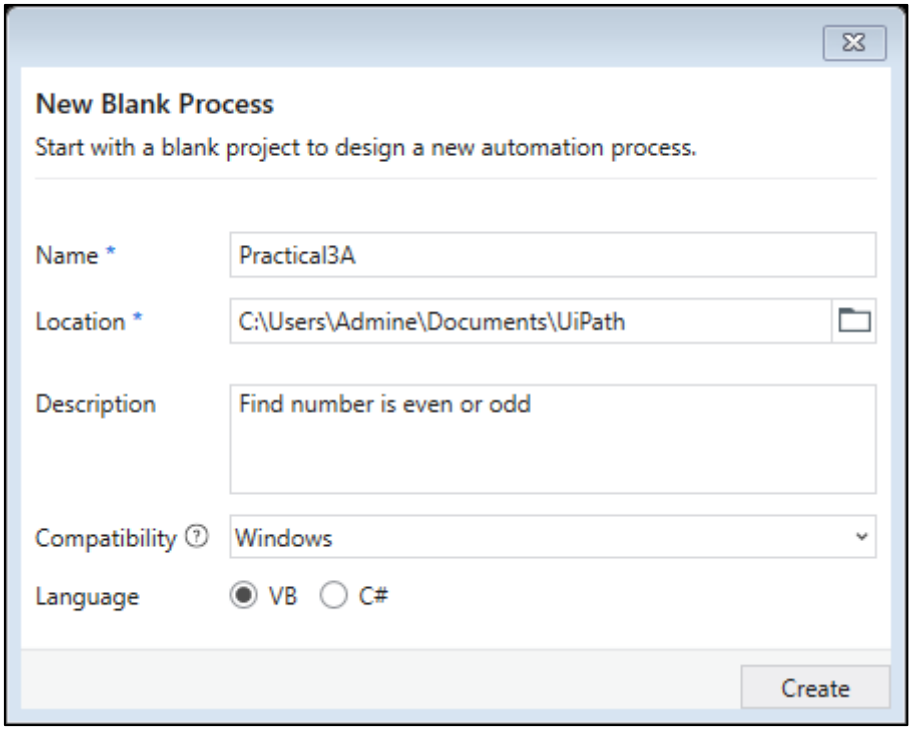




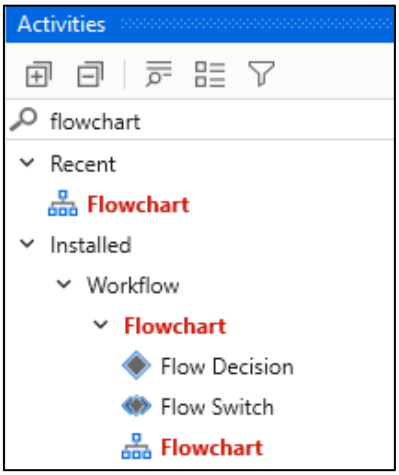
## C. Create an automation UiPath Project using decision statements.

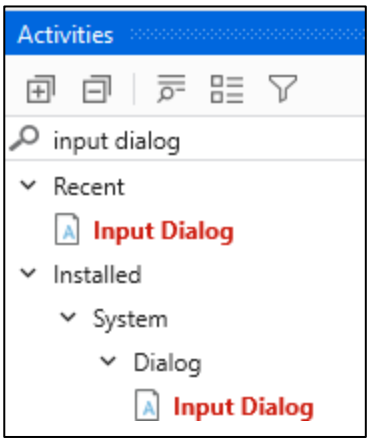
**AIM: Use if else activity to display even and odd number in UiPath.**

1. Create new process Practical3A, give description and click on create.

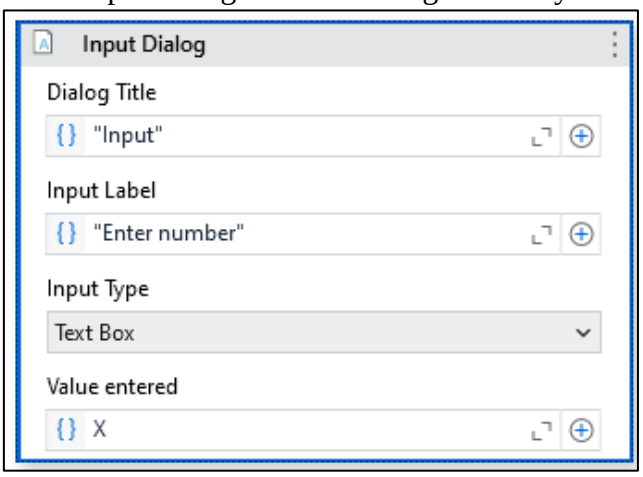


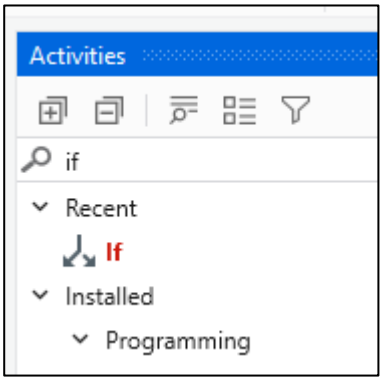
2. Drag flowchart inside main sequence. Inside flowchart drag input dialog box and set it to start node.



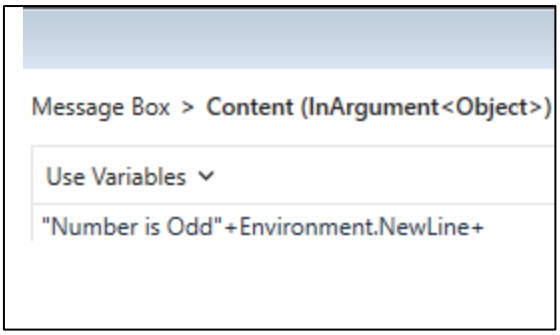


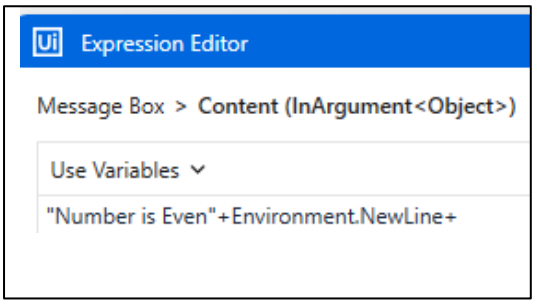
3. Fill details for input dialog box. Then drag if activity below input dialog box.



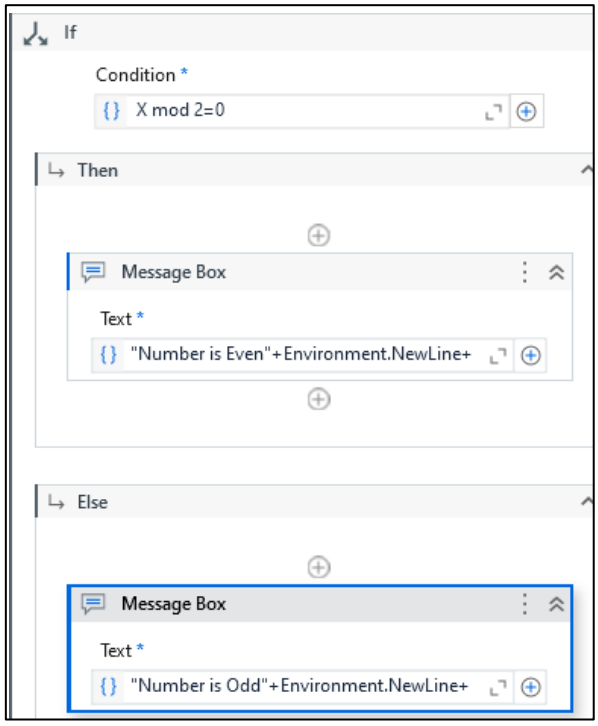


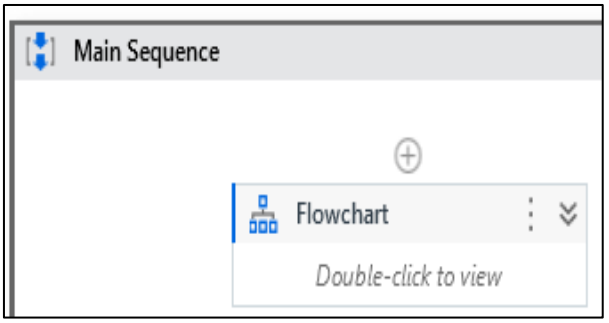
4. In condition, give condition as ‘X mod 2=0’. Drag message box inside then and else block and display even and odd message in them.



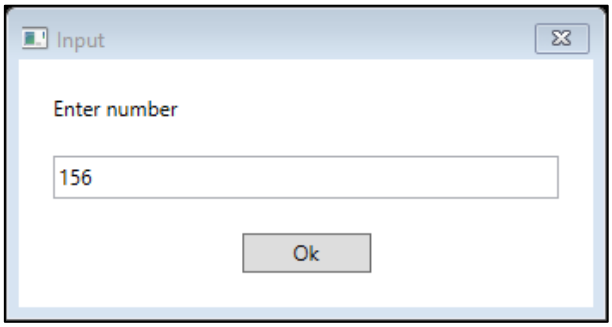


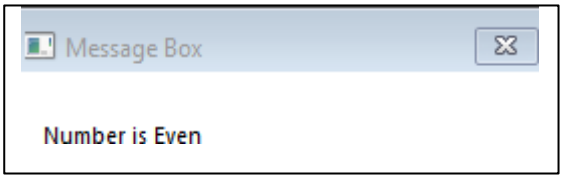
5. If else block will look like this.

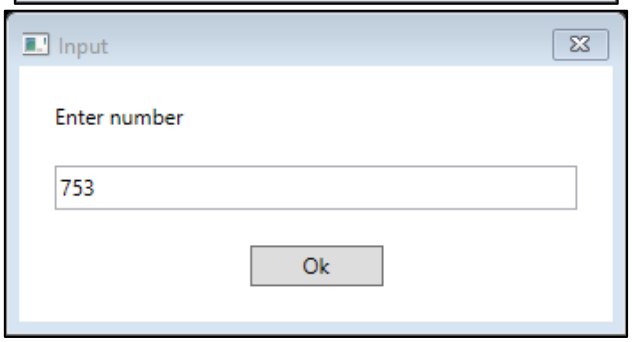


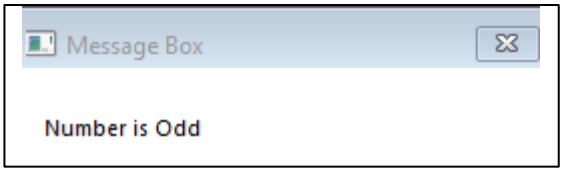


6. Click on Run file.





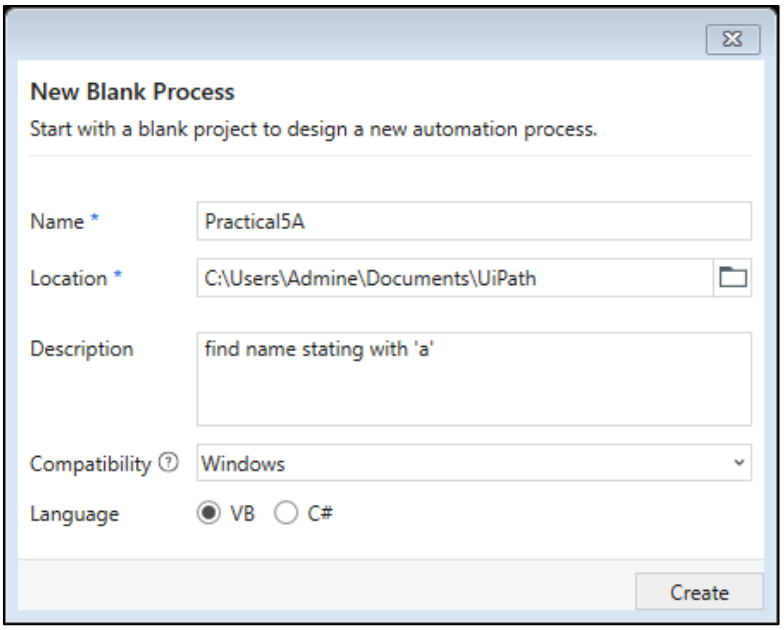




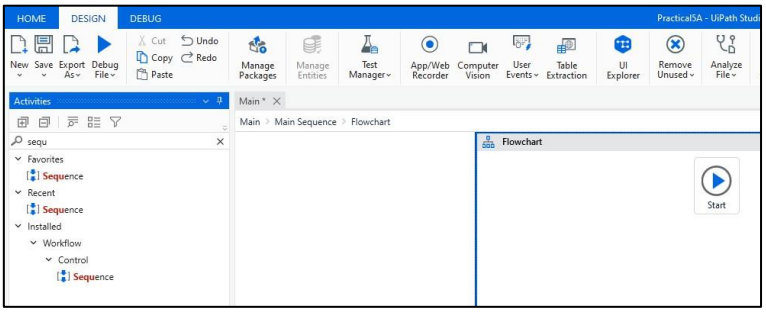
## D. Create an automation where the number of names starting with "a" is counted and the result is displayed.

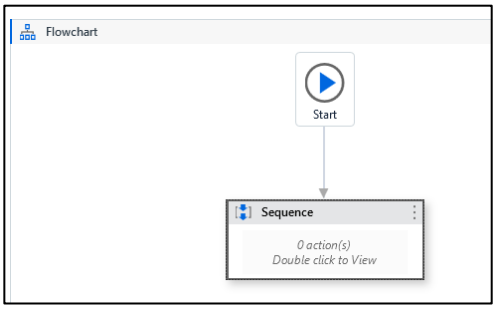
**AIM: Consider an array of names. We have to find out how many of them start with the letter "a".**

1. Click on Process and create process Practical5A, give description and click on create.



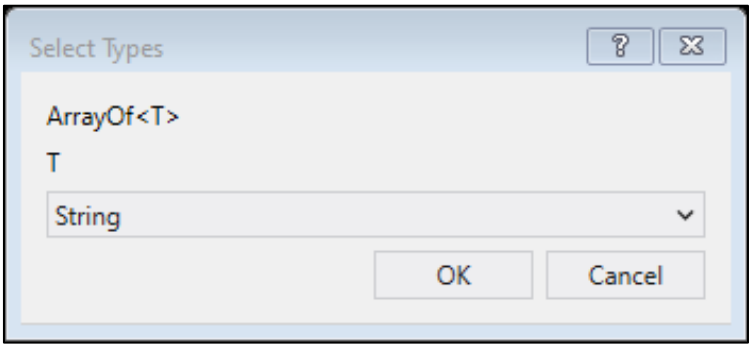
2. Drag Flowchart inside main sequence. Then add sequence inside flowchart and set as start node.



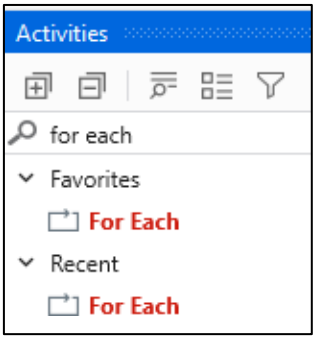


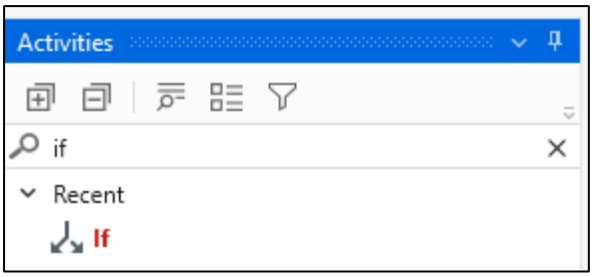
3. Click on create variable, name it as 'names' and select variable type as Array of String.

| Name | Variable type | Scope | Default |
|---|---|---|---|
| count | Int32 | Sequence | 0 |
| names | String[] | Flowchart | {"Sandhya","Akash","Amit","John","Ansh"} |
| *Create Variable* | | | |

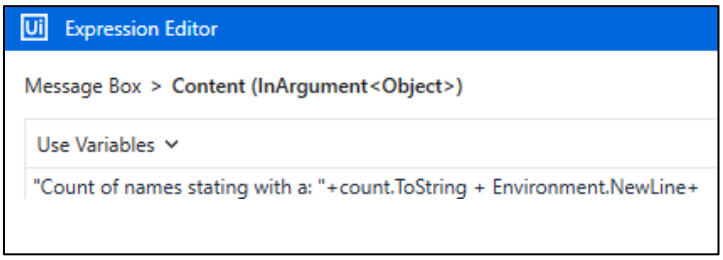


4. Drag for each inside sequence and if inside body of for each activity.

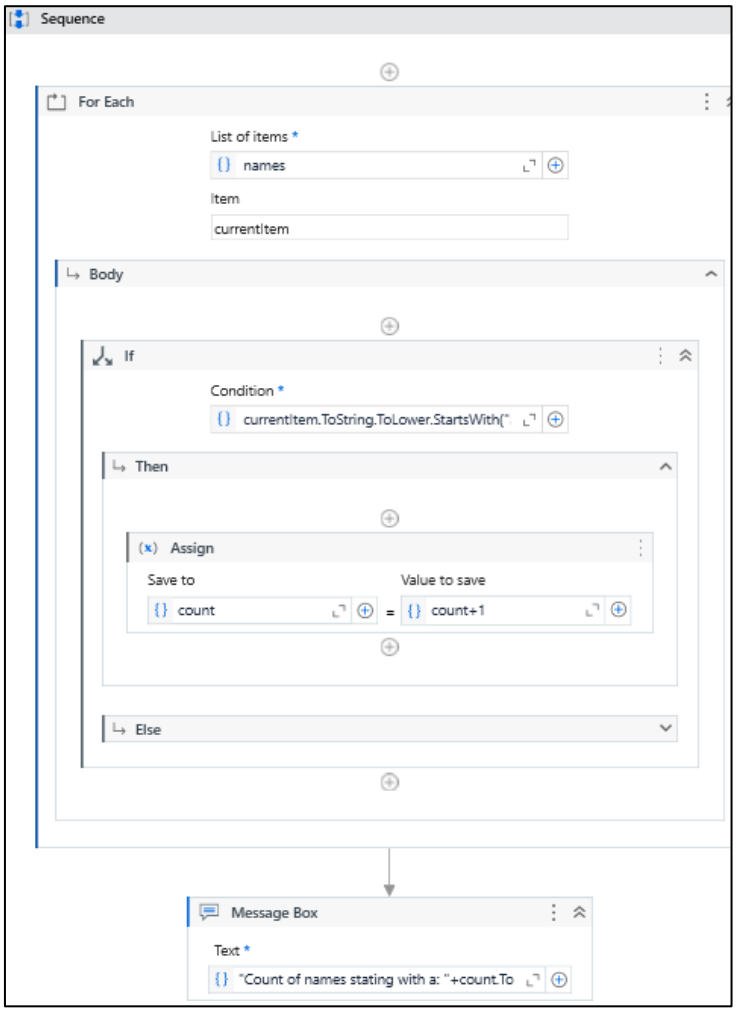


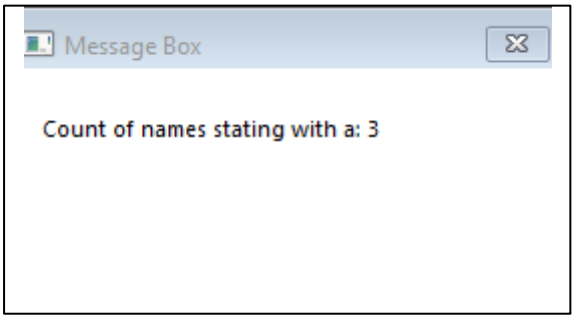


5. In list of items type names. In condition box type currentItem.ToString.ToLower.StartsWith('a'). Drag message box below for each activity and create count variable and display count of letter in message box.



6. Click on Run file.



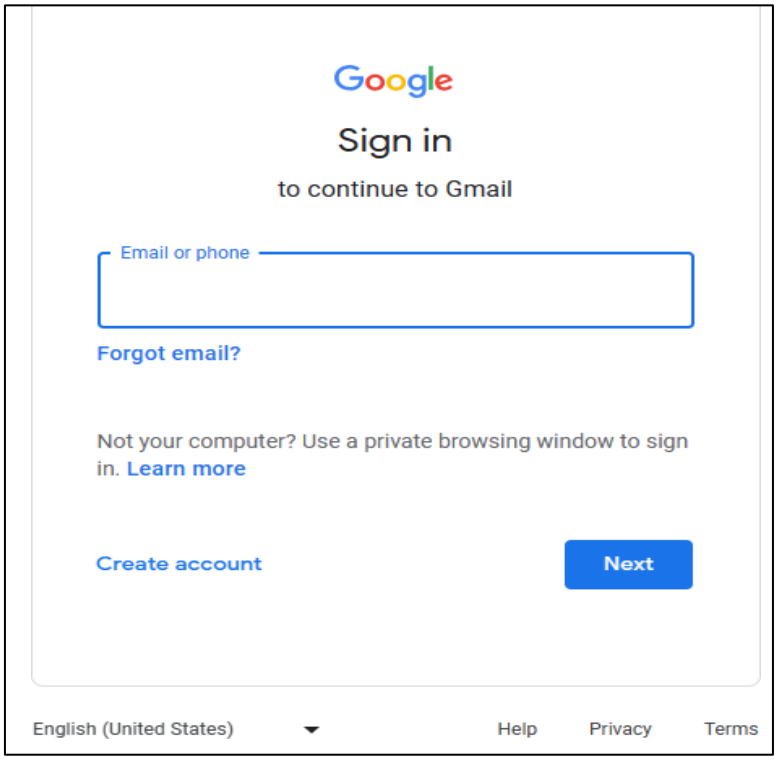


## E. Create a UiPath Robot which can empty a folder in Gmail solely on basis of recording.

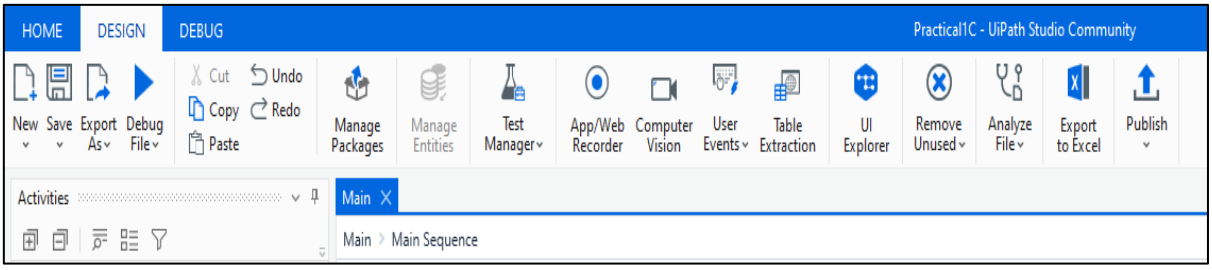
**AIM: Use App/Web Recorder from Design Tab to login to Gmail and delete mails from bin.**

a. Click on Process and create process Practical1C, give description and click on create.

b. Open chrome web browser and go to Gmail login screen. Gmail (google.com)

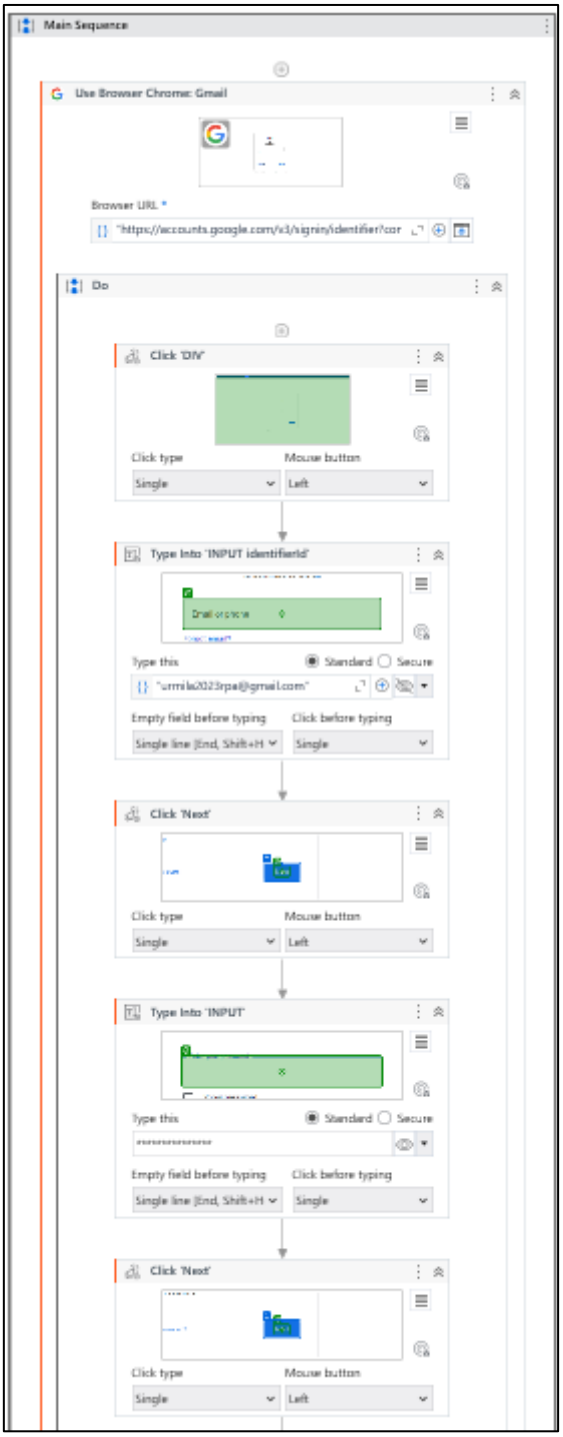


c. Go to main sequence then Click on App/web recording. Remember Gmail login screen should be behind UiPath Studio window so the recorder can start in web browser only. Recording will start, perform the login steps.



d. Use 'Type into' for typing and 'Click' for mouse clicking the next button. We can use secure option for password typing and standard for typing email.

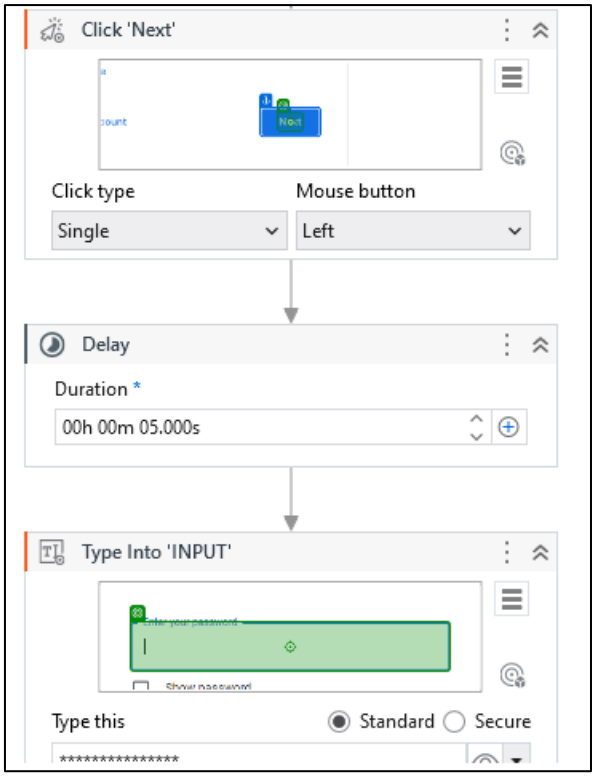
e. After deleting bin, press 'Esc' key two times or click on save option in recorder screen. Following are the steps recorded in recorder.

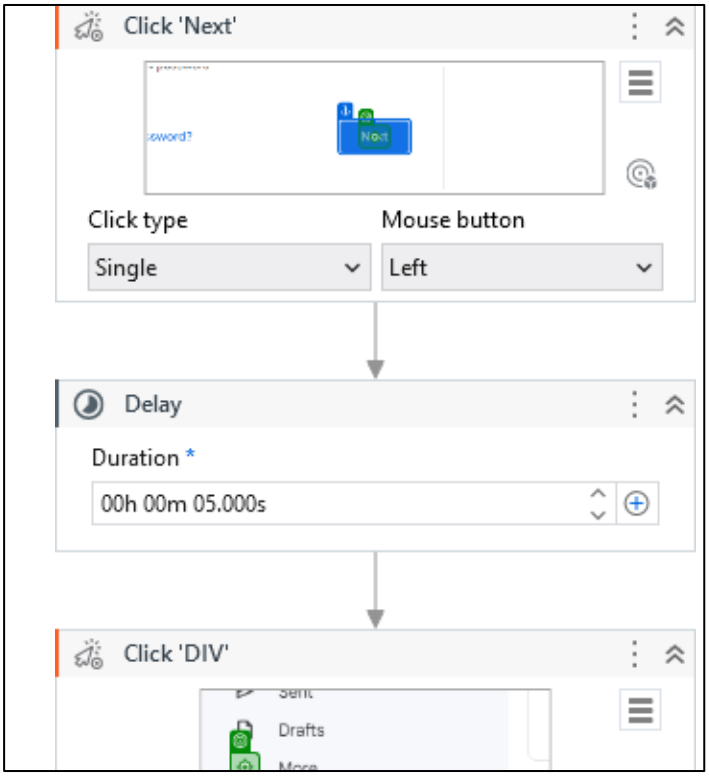


f. Now, we can run the file.

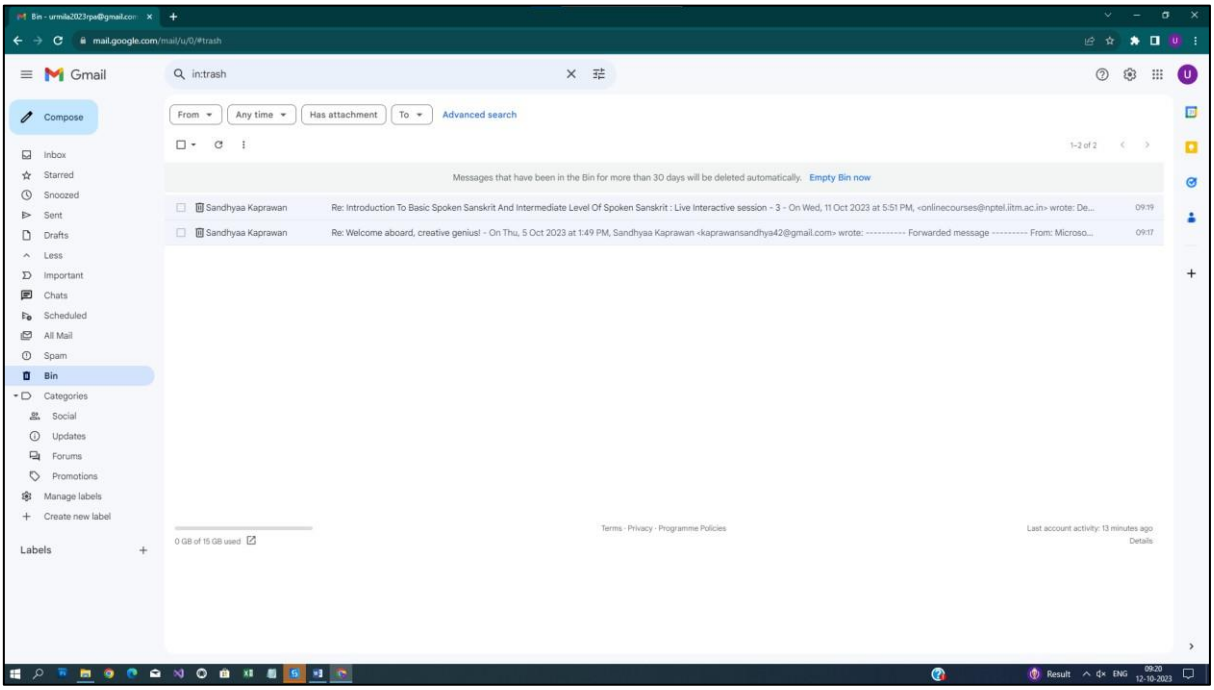
g. Due to network fluctuation, it may take some time to load the next window in browser but the UiPath reorder works very fast so, to slow it down we can add some delay between the screens. For this, search for delay activity in search activities panel and add delay after click next button event i.e. below next button.

h. Add 5 second delay below both the next button.



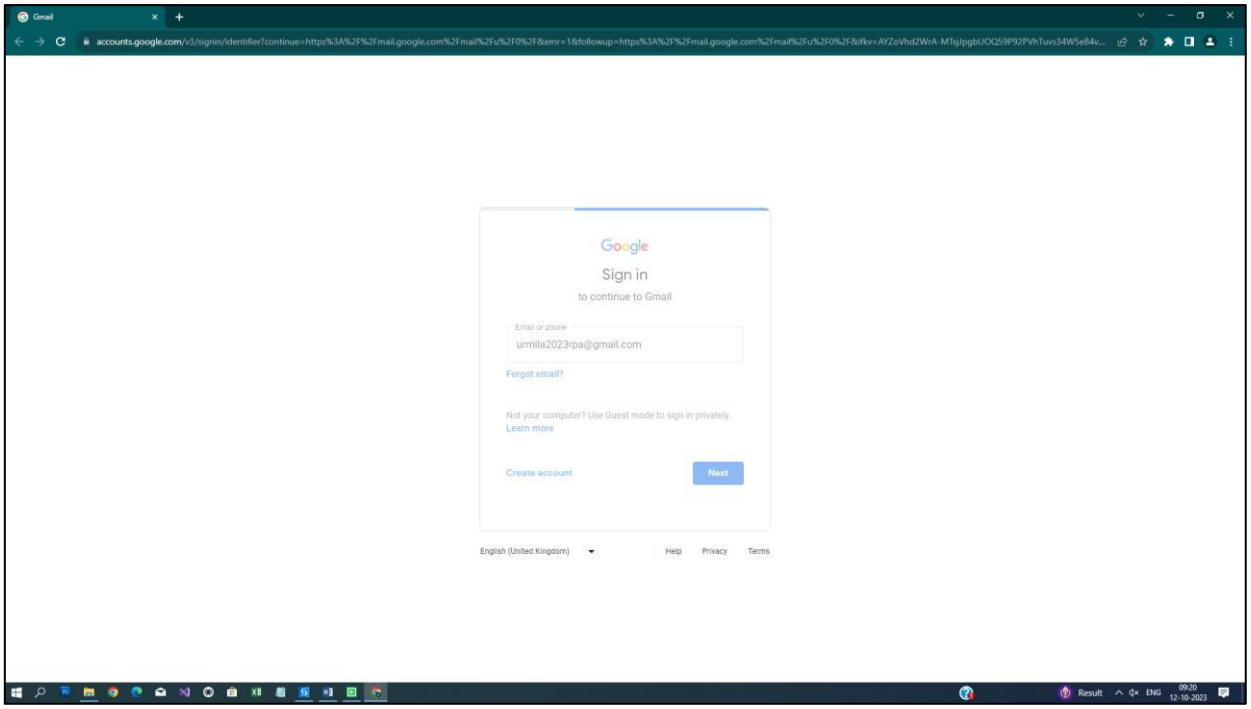


i. Trash bin before robot delete it.

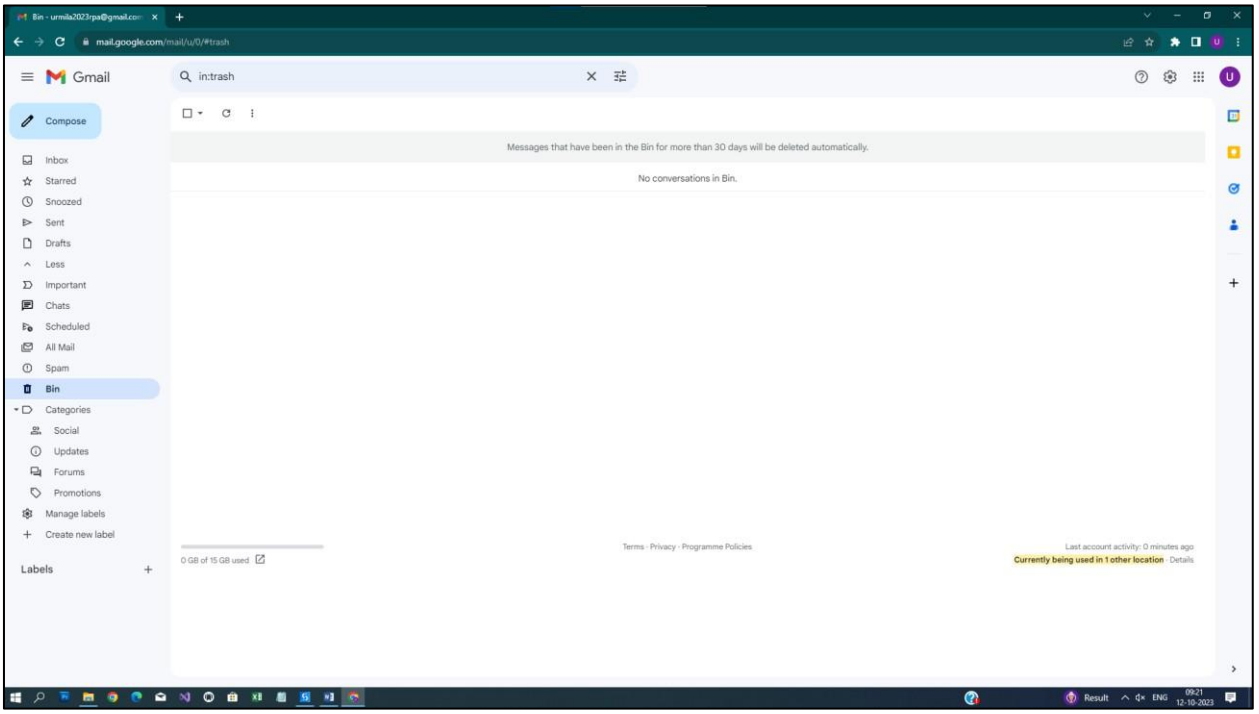


j. Now, before running file make sure you have some files in trash bin so robot can delete those files.

k. Click on Debug file and Run file option.



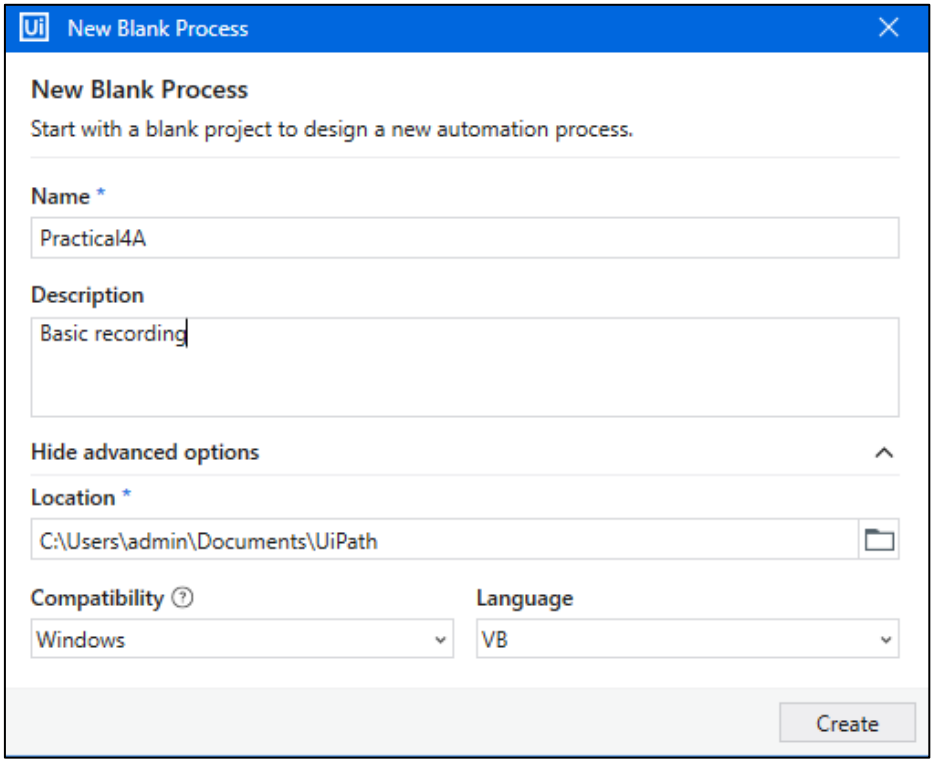
l. Trash bin after robot delete it.



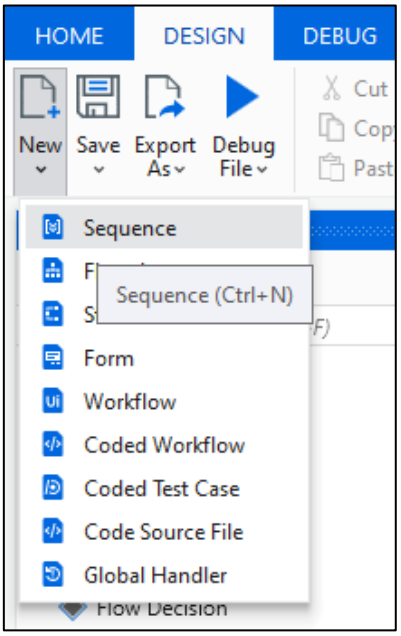
## F. Automate any process using basic recording.

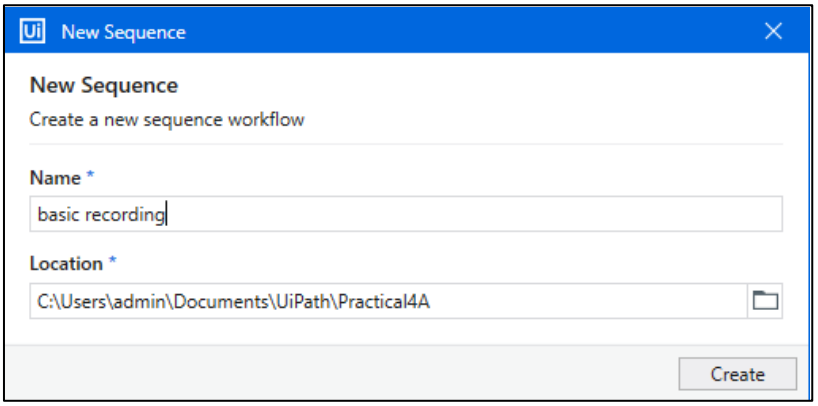
**AIM: Use basic recorder to record basic sequence of activity in UiPath.**

a. Create new process Practical4A, give description and click on create.

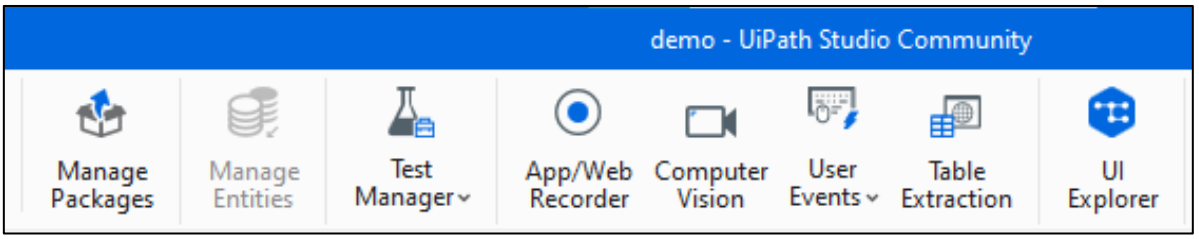


b. Click on new then sequence and name it as basic recording and click create.

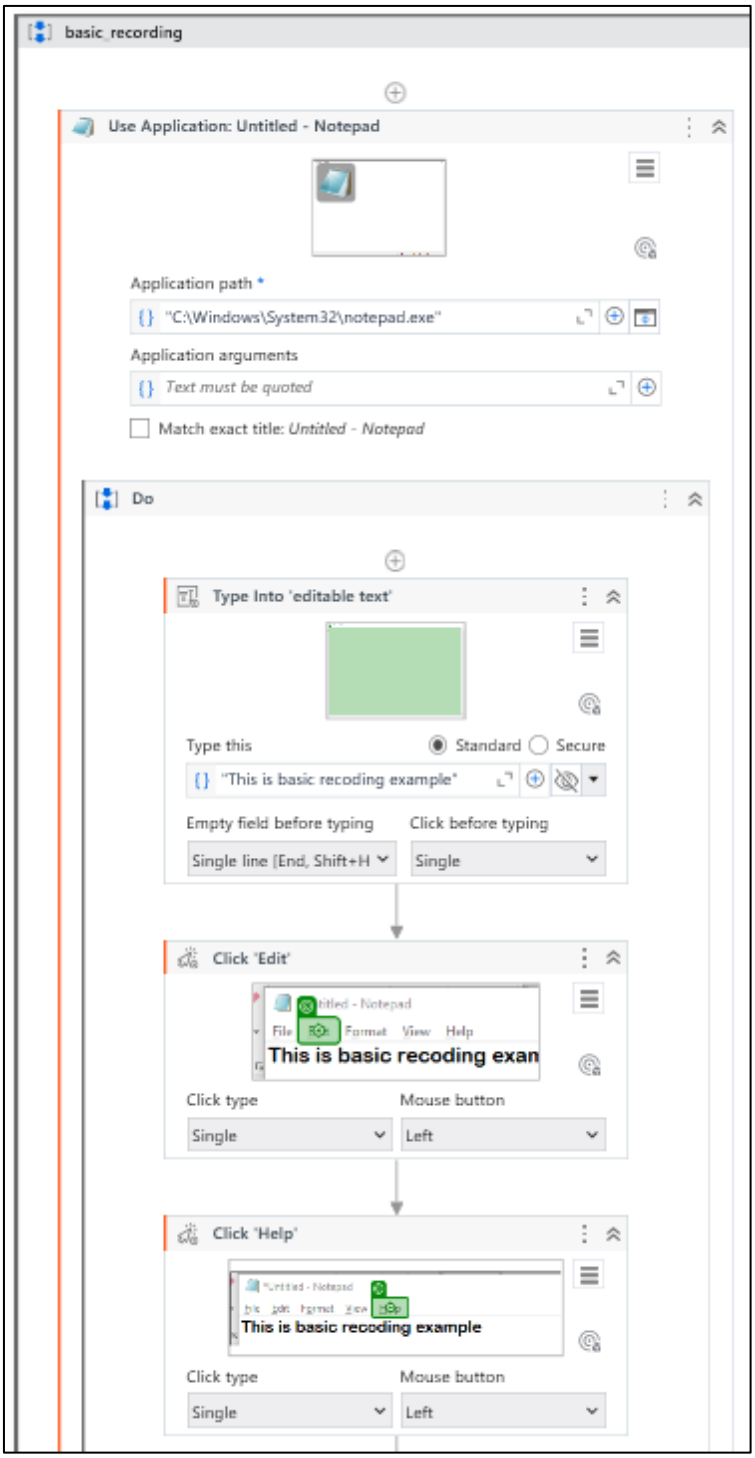


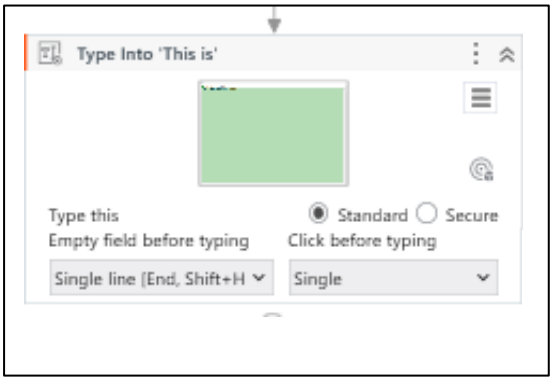


c. Open notepad and keep it in background so when recording is started it appear automatically after UiPath. Click on App/Web recorder and start recording sequence.

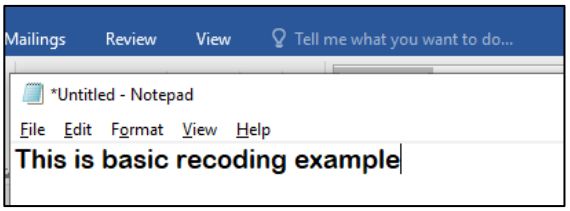


d. Click on notepad and select type into and in text field type “This is basic recording example” then type enter. Click on Edit then click on Help. After this click on notepad writing area and select type into again and in text field type “Done by, Superman -000’ and enter. After all the recording is done press save or press Esc two times to get prompt for saving the recorded sequence.





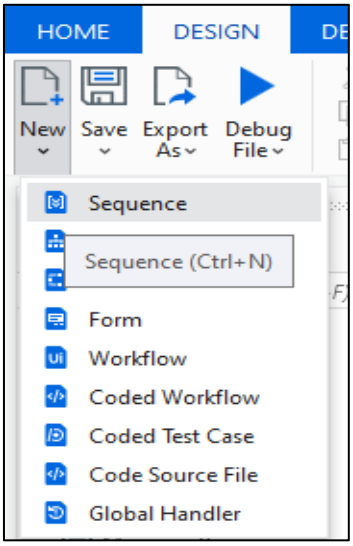
e. Click on run file.

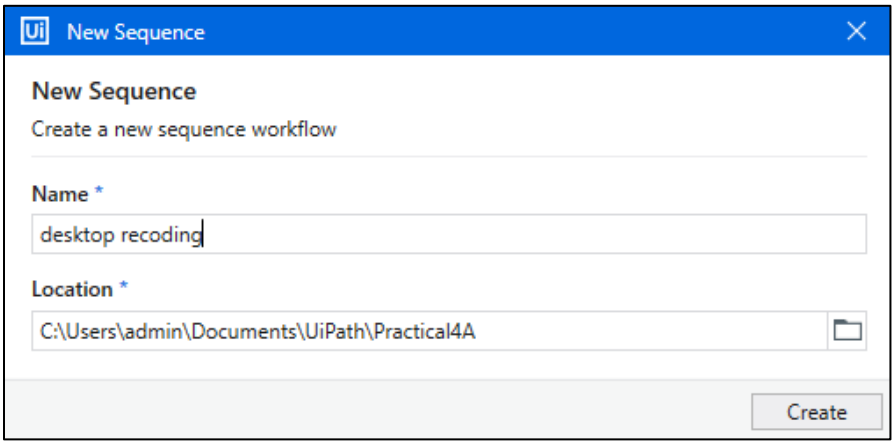


## G. Automate any process using desktop recording.

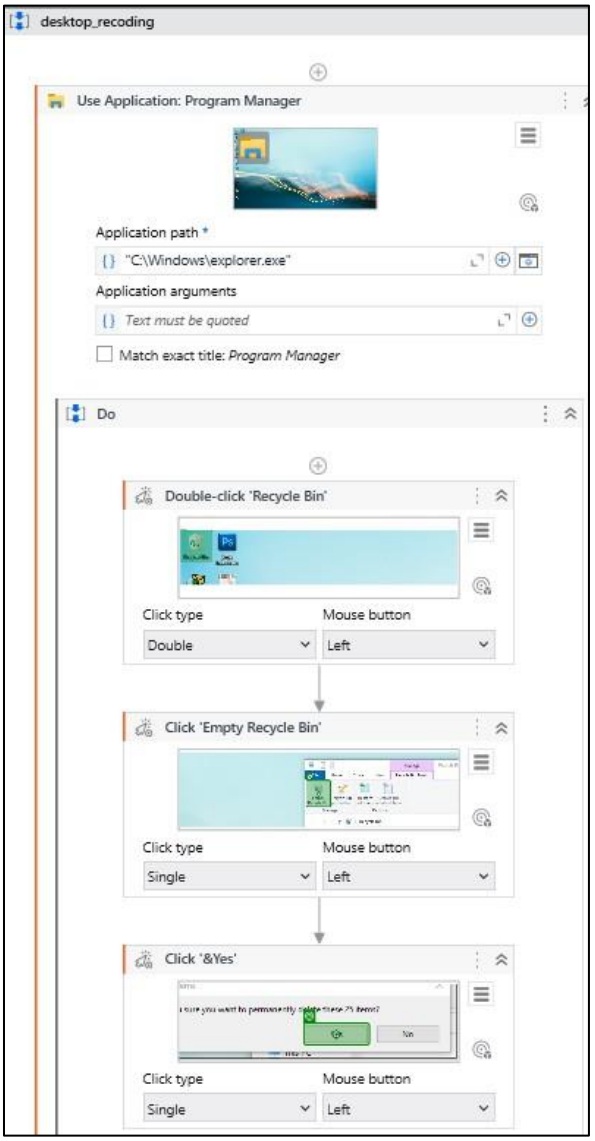
**AIM: Use desktop recorder to record sequence of emptying recycle bin in UiPath.**

a. Click on new sequence name it desktop recording and click on create.

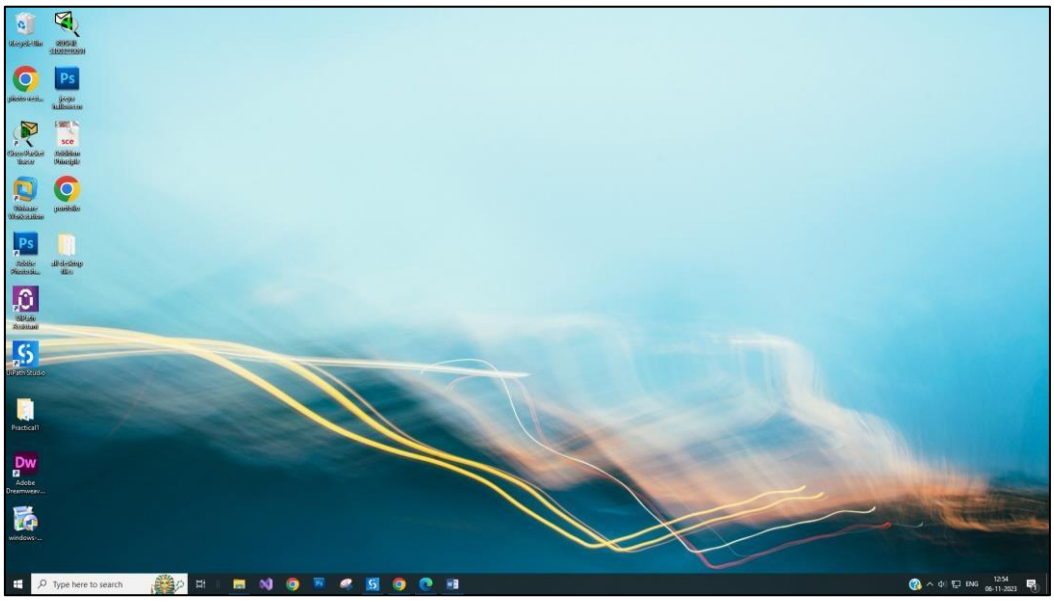




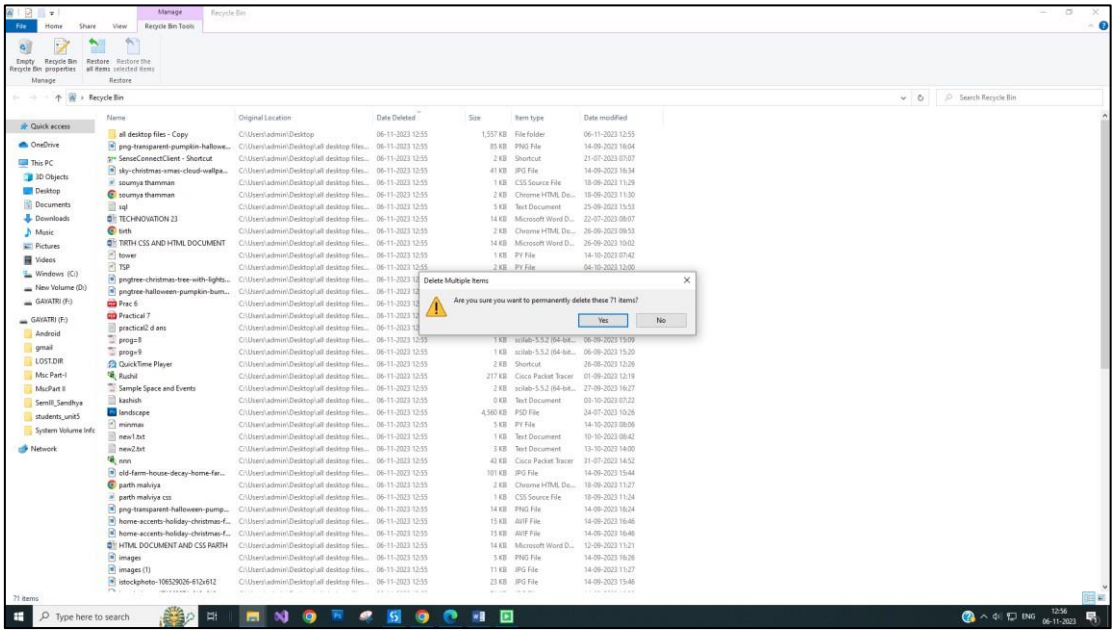
b. Click on App/Web recorder. Make sure desktop is in background and no other application is in middle of UiPath. After recorder start click on Recycle bin icon select double click and it will open the recycle bin. Click on Empty Recycle bin icon and select click then click on Yes when prompted and it will clear all files in recycle bin.

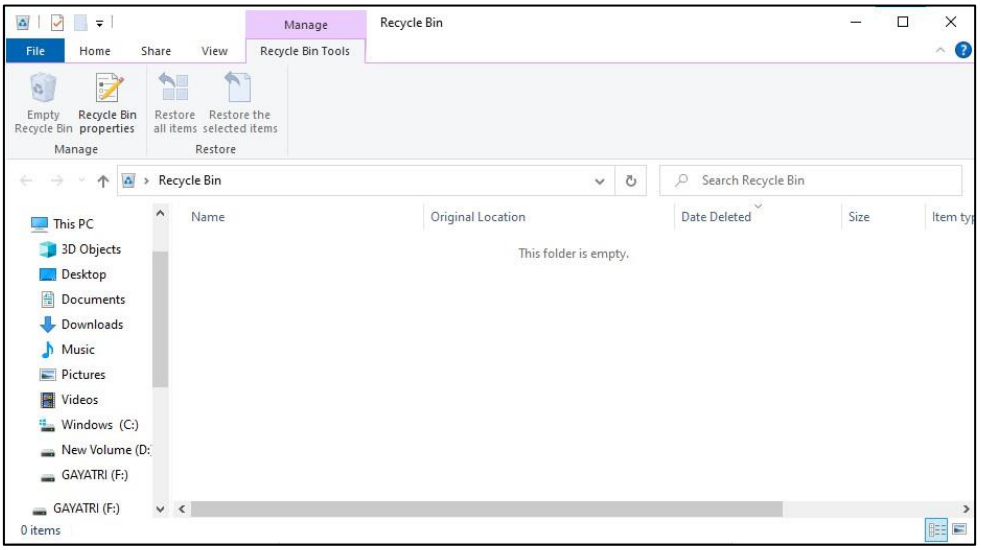


c. Make sure before you run file, recycle bin has some files in it so the robot can delete it.



d. Now run file.

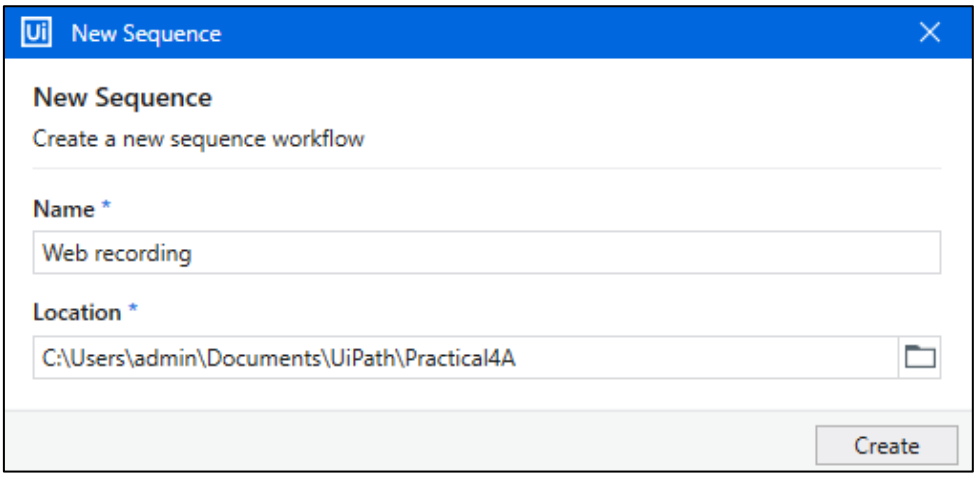




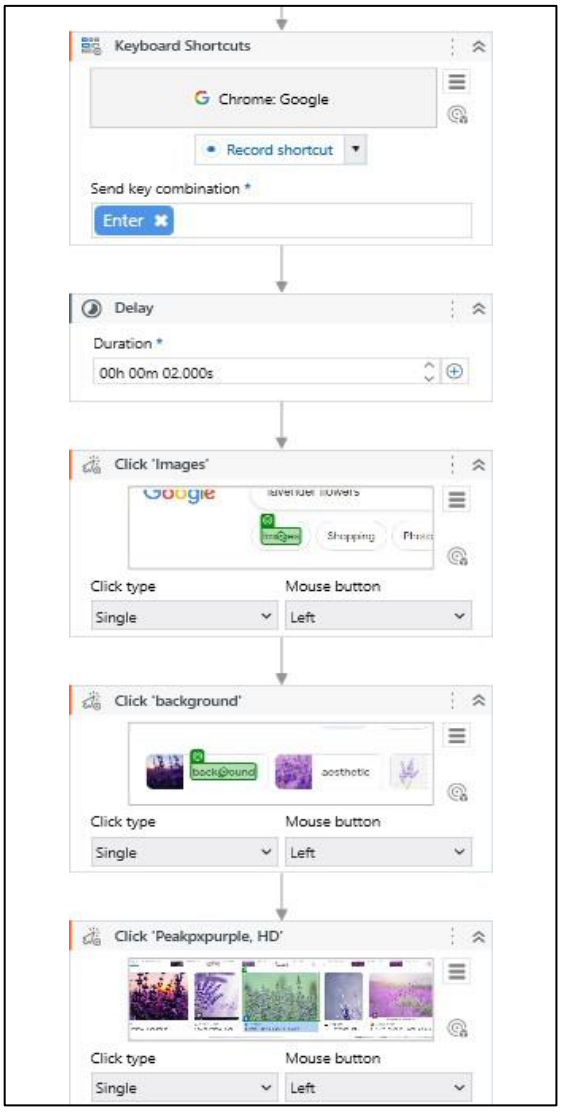
## H. Automate any process using web recording.

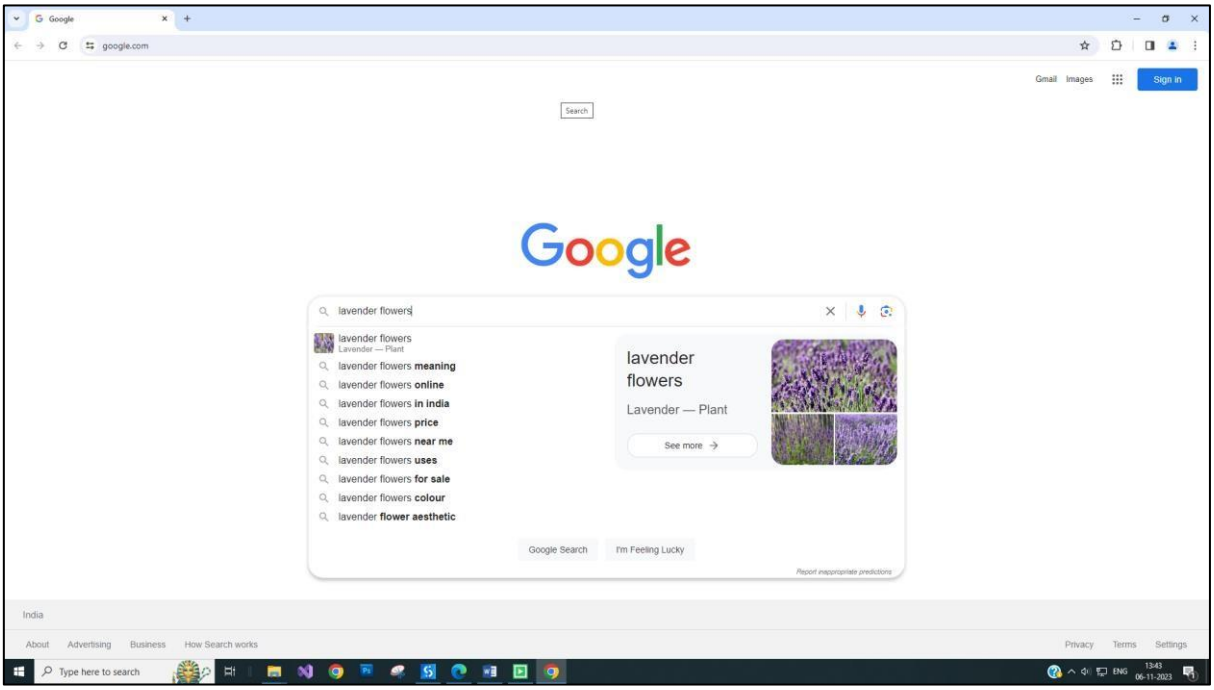
**AIM: Use Web recorder to record sequence of using google chrome and searching lavender flower in search box then clicking one image from image section.**

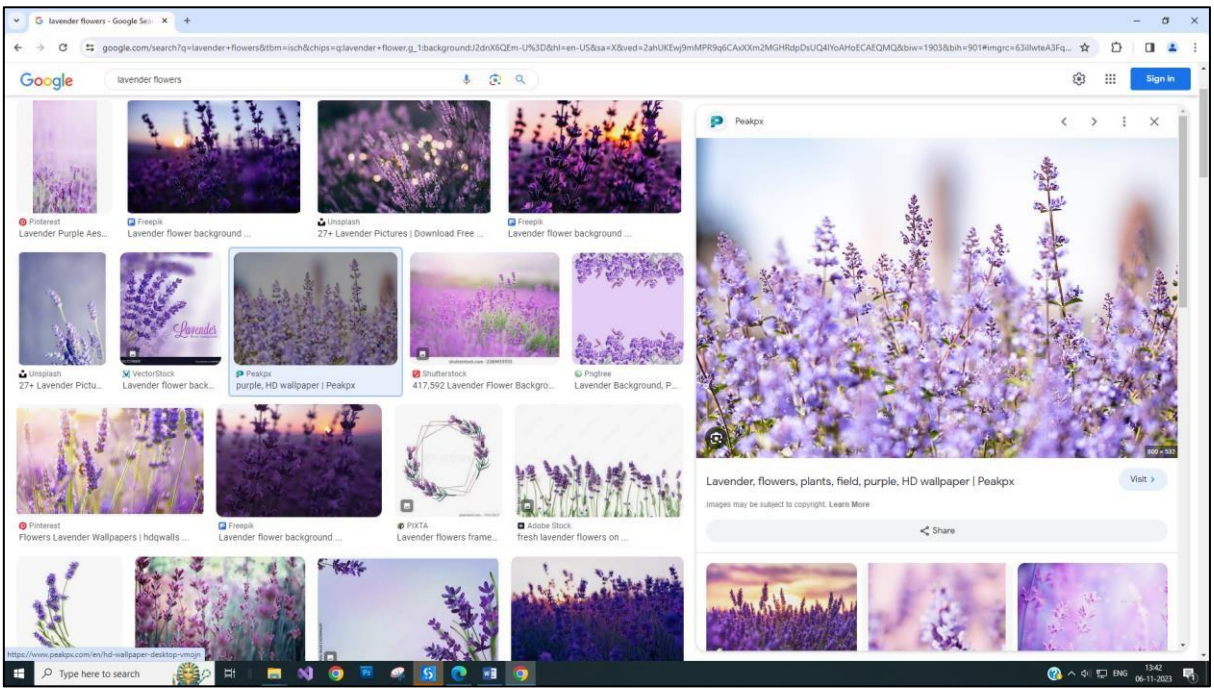
a. Click on new sequence, name it web recording and click on create.



b. Make sure google chrome is open in background. Now start web recorder then click on google chrome home page. Click on search bar and type into "lavender flower" in it. Then, select image after it load and click on one of the images and save recording sequence. Now, we will add delay after searching as it will take time to load the search results. So add delay from activities for 02 seconds.







c. Run file and recorder will automatically open chrome and do the sequence of activity which is assigned in it.
